Between 1996 and 2021, Israeli computer scientists published 54,350 papers, according to data from the Scimago ranking website. On average, each of these papers was cited 20.57 times. That puts Israel in fourth place in the world in citations per document among the 50 countries that published the most computer science papers in this span. In some categories, Israel ranks even higher. Here, we explore the strengths of computer science research at higher education institutions in Israel.

Researchers in Israel blaze new trails for the machines at the centre of our lives

Over the past decade, nine Israeli-trained scientists have won the Gödel Prize, demonstrating the high quality of Israeli computer science research.
